Futurique

Your Future, Reimagined.

An AI-powered career intelligence platform helping people navigate the future of work.

The future of work is changing. Are we ready?

AI is transforming industries, changing job tasks and creating new skill requirements, yet people lack accessible, personalised guidance to prepare.

Students

Uncertain about which skills and careers to pursue.

Fresh graduates

Struggle to bridge academic qualifications and employer requirements.

Working adults

Need to adapt and reskill as AI changes their industries.

Employers and HR

Struggle to identify skill gaps and prepare their workforce.

Core problem: career information is fragmented, constantly changing and hard to turn into decisions. People need to understand how to prepare for tomorrow, not only which jobs exist today.

UN: 20.0% of young people aged 15–24 were not in employment, education or training in 2025. This shows a wider employment and learning challenge, not a measure of AI-related displacement. Source: sdgs.un.org/goals/goal8

Meet Futurique: your personal career intelligence platform

Career intelligence, AI-powered analysis and personalised learning in one platform.

1. Career matching

Occupations aligned with your skills, qualifications and interests.

2. Skill-gap analysis

Current skills versus target-role requirements.

3. Personalised upskilling

Relevant courses and activities to bridge gaps.

4. Career Crash Test

Compare how AI-adoption scenarios could affect careers.

5. Regional insights

Job-market information for a selected country or region.

6. Multilingual access

English, Simplified Chinese and Traditional Chinese.

7. SDG mapping

Careers and skills connected to the sustainable development goals.

Our promise: from career uncertainty to an actionable plan.

From skills to a future-ready career

1. Discover yourself

Enter qualifications, skills, interests, experience and goals.

2. Analyse the market

Retrieve labour-market data and, once integrated, job ads and skill requirements.

3. Match careers

Compare your profile with occupation requirements and see why roles may suit you.

4. Identify skill gaps

See the relevant skills you have and those you may need.

5. Build a pathway

Courses and learning activities in a practical sequence.

6. Test the future

Use the Career Crash Test to compare AI-adoption scenarios.

Profile → Market Data → Career Match → Skill Gaps → Upskilling → Future Scenarios

Career Crash Test: prepare for more than one future

Traditional platforms help users explore existing jobs. Futurique helps users prepare for how careers may evolve.

Scenario A: moderate AI adoption

AI is adopted gradually. Some tasks are automated or AI-assisted, while others still need human expertise.

Scenario B: rapid AI adoption

AI is adopted faster, potentially raising automation exposure for some tasks and changing the skills employers value.

What users discover

Which tasks may be exposed to automation · which skills stay useful or grow in importance · which skills to develop · which alternative careers suit their transferable skills.

Example: accounting

Routine data entry may be increasingly automated, while financial interpretation, analytical judgement and effective use of AI tools may remain valuable.

Our differentiator: turning future uncertainty into practical preparation. *Illustrative scenario, not a verified employment forecast.*

Career guidance that understands your context

Regional career insights

Choose a target country or region to explore labour-market indicators, vacancies and locally advertised skills. For Malaysia: Malaysian labour statistics and, where reliable vacancy data exist, opportunities by state or industry.

Multilingual experience

English · 简体中文 (Simplified Chinese) · Malay. Language selection helps users understand recommendations in their preferred written language.

Personalised recommendations

Skills and goals connect to career matches, identified gaps and relevant learning activities.

Why it matters: a recommendation is more useful when it considers your background, your target market and your access to learning opportunities.

Turning data into career intelligence

Proposed stack

Replit: development, testing, deployment
Frontend: existing web framework, confirmed from the codebase
Backend/API: data retrieval, processing, matching logic
Malaysia Open API / DOSM: official labour statistics
Job-postings API: planned
Database: planned
Generative AI API: planned

Potential data sources

Malaysia Open Data: developer.data.gov.my/quickstart
DOSM Labour Force Statistics: data.gov.my/data-catalogue/lfs_month
Malaysia job postings (potential provider): headcountlabs.com/data/job-postings-malaysia

User Profile → Labour-Market Data → Skill Mapping → Career Matching → Skill-Gap Analysis → GenAI Explanations → Learning Pathway

Data principle: every recommendation is traceable to a source, with its reporting period shown. Official labour statistics are not current vacancies; integrations are labelled live, planned or awaiting API access.

Empowering people for an inclusive future of work

SDG 4 · Quality Education

Target 4.4: more relevant technical and vocational skills for employment and decent jobs. **Our contribution:** identify skill gaps and relevant learning.

SDG 8 · Decent Work and Economic Growth

Target 8.5: productive employment and decent work for all, including young people. **Our contribution:** career readiness and adaptation.

SDG 10 · Reduced Inequalities

Our aim: broader access to career guidance through personalised recommendations and multilingual support.

Phase 2 impact KPI: the percentage of test users who identify at least one relevant skill gap and one suitable next learning activity. **Proposed target:** at least 80%, tested with at least 20 participants. This is a proposed target, not an achieved result; initial tests set the baseline.

From prototype to functional career intelligence

Phase 1: prototype foundation

Build the Futurique interface on Replit · establish main user journeys and dashboards · define career matching and Career Crash Test concepts · identify data sources and sustainability metrics.

Phase 2: integration and testing

Connect and verify labour-market data · transparent matching and skill-gap workflow · integrate learning resources · evidence-based Crash Test scenarios · regional filtering · multilingual testing · feedback from at least 20 participants.

Validation criteria

Do users understand why a career is recommended? Can they find skill gaps and a suitable learning activity? Can they use their preferred language? Are sources, dates and scenario assumptions transparent?

Our approach: build, test, learn, improve.

The future belongs to those who prepare for it.

Futurique makes career planning more accessible, personalised and proactive: understand changing opportunities, identify the skills you need, explore different possible futures and take practical steps.

Futurique · Your Future, Reimagined.

From uncertainty to opportunity. From skill gaps to growth. From today's decisions to tomorrow's possibilities.
